

Are you planning to buy a new house? Do you want to make it the best place to live in? Then check out what Vastu for a new house has in store for you and how you can transform your abode into a heaven on earth.

The ancient science of Vastu Shastra emphasizes that the design and layout of a house play a crucial role in bringing good luck and positive vibrations to the home and its residents. By fostering harmony among the inhabitants, Vastu creates a foundation for a peaceful and happy life.

Is Vastu for a New House Really Important?

Absolutely! Imagine returning home after a long, tiring day at work, only to be met with disputes and conflicts among your family. You would surely regret coming back to what feels like a hellish environment. Nobody wants to feel this way about their own home.

Buying a new house is a significant milestone in life- one that many consider one of their biggest achievements. Therefore, it's essential to examine Vastu principles before making a final decision. After all, there's no harm in trying to avert the daily tribulations of life.

According to Vastu Shastra, the positioning of various elements within a home can influence the flow of positive and negative energies. A Vastu-compliant house ensures that these energies are harmonized, boosting positivity and inviting peace and abundance into your life.

What Are the Things to Keep in Mind Before Buying a New House?

To ensure that your new house becomes the perfect home, consider the following Vastu guidelines before making your purchase:

1. Direction of Construction If you plan to buy a plot and build a house, ensure that the north or north-east side of the plot is open. Construct the house on the south or south-east side for optimal energy flow.

2. Entry of the Home The main entrance should ideally be from the north-east direction. This entry point is crucial as it is the gateway for positive and negative energies. A well-placed door can protect against financial losses, illnesses, and family disharmony. Additionally, the door should open in a clockwise direction.

3. Location of the Bedroom

Bedrooms should ideally be located in the south-west part of the house to promote stability and tranquility.

4. Building Material

Use new and unused materials for construction. Using recycled materials may carry negative energies from previous structures.

5. Location of the Bathrooms

Bathrooms should not be near the main entrance. Ensure that the bathroom walls do not share space with the kitchen or prayer room.

6. Avoid Arch-Shaped Windows and Doors

Opt for straight-edged windows and doors, as arch shapes can disrupt the flow of positive energy into the home.

7. Location of the Temple

Create a designated space for prayer and meditation in the north, north-east, or east zones of the house. This enhances spirituality and promotes peace, regardless of your religious beliefs.

8. Avoid Spiral Staircases

Spiral staircases represent chaos and may lead to persistent troubles. Simple staircases with a single twist are preferable.

9. Location of the Kitchen

The kitchen should be situated in the south-east section, as this area is governed by the element of fire, inviting abundance and ensuring you never run out of food.

10. Location of the Balcony

Balconies should be placed in the northern or eastern part of the house, allowing sunlight to flood in and creating a warm, inviting atmosphere. A spacious balcony provides a relaxing environment to unwind.

11. Surroundings

Choose a house surrounded by greenery. Natural surroundings significantly increase the chances of attracting positive energy.

12. Consult a Vastu Expert

For the best results, consider consulting a Vastu expert who can provide a tailored blueprint for your home, ensuring that it meets all the essential Vastu principles.

Conclusion

Incorporating Vastu Shastra into your new home can significantly enhance your living experience. By considering these do's and don'ts, you can create a space that promotes positivity, peace, and prosperity for you and your family. Happy house hunting!
